KalSoft demonstrates server virtualization on Microsoft platform

Karachi: Microsoft unveiled the Microsoft 2008 Virtualization Launch Wave. The one day session which marked presence of decision makers from across diversified industries aimed to enhance awareness of Virtualization solutions within the country. The event aimed to introduce three key virtualization technologies i.e. Windows Server 2008 Hyper-V, System Center Virtual Machine Manager (SCVMM) 2008 and Microsoft Application Virtualization (App-V) which formulate the core of Microsoft's current solution offerings in the domain of virtualization for its customers in Pakistan. Microsoft's premier partners KalSoft demonstrated various configurations and operations which could be achieved through Windows Server 2008 Hyper-V. Principal Consultant from KalSoft, Kashif Awan, took the audience through various scenarios on how Virtualization can be used to effectively manage available resources.

Speaking on the occasion, Khurram Hanif Kalia, President and CEO of KalSoft, said, "In a time when assuring the integrity of data is so critical for the success of an organization, virtualization offers IT Managers the opportunity to completely secure their intellectual property. Critical processes such as Disaster Recovery, backups and having robust access to information should a crisis arise, are essential to the business continuity of an enterprise".
